

HYKEE LOCK PICK - 7 CUTS

Pick **some of the most popular van replacement locks in the UK.**

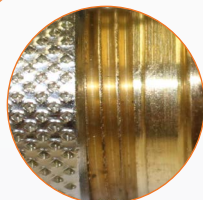

Red dot

- Insert the tool into the lock with the red dot adjacent to the vertical slot of the lock.

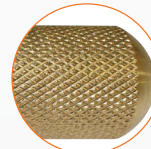

Body

- Your tool is hand made from high-quality steel for extra-durability.

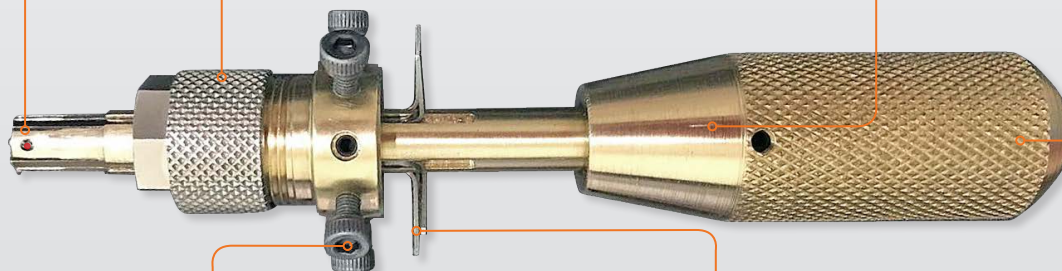

Nut wheel

- Helps manage the movement of the picking arms by adding friction for better control when picking.

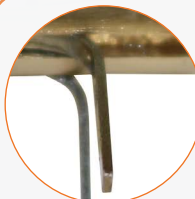

Handle

- Easy grip on your tool for perfect tension control.

Grub screws

- Tighten them to hold the picking arms and pins in position.

Picking arms

- Pick each pin individually to open the lock.

Unparalleled reliability

- Each pick is rigorously tested before shipping to ensure functionality and build quality.

HYKEE LOCK PICK - 7 CUTS

1

Loosen the nut wheel and the seven grub screws.

2

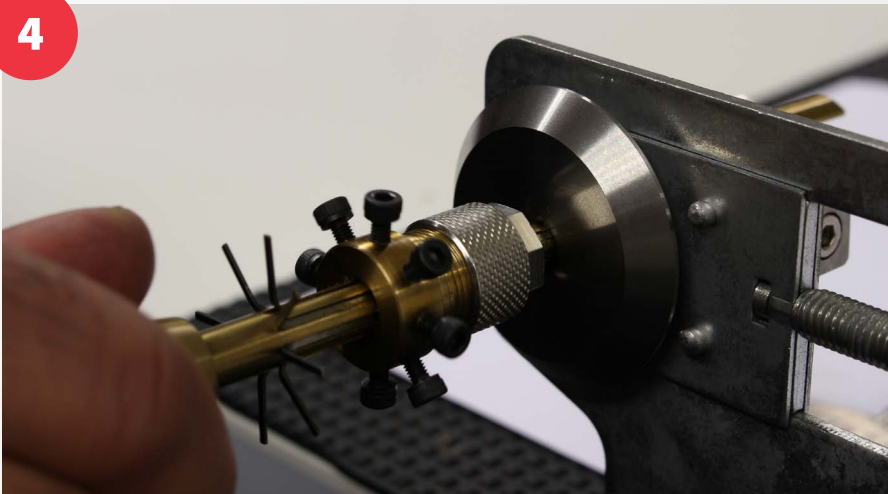

Retract the picking arms all the way back to the end of their slots.

3

Adjust the nut wheel so that the picking arms can freely move.

4

Insert the tool into the lock with the red dot adjacent to the vertical slot of the lock. Then apply tension left or right. As with any picking process, tension control will determine the pins that are moving and those that are solid.

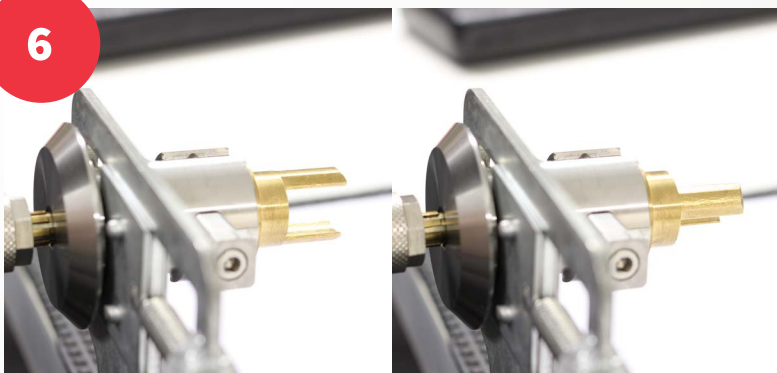

5

Use the arms to pick the solid pins. Once you have picked a pin and you can see a springy movement, tighten the grub screw to hold the arm and pin in position.

You may have to repeat the process of adjusting the picking arms on picked pins to find the shear line.

6

Continue the picking process on all the pins until the lock opens.

Picking arms and screws work together to allow you to easily pick each pin.

7

When the lock is open, tighten the nut wheel in the picked position to keep the arms in place. You can now use the tool as a trial key.
