SALTO **KS**

A person with dark hair, wearing a colorful patterned t-shirt and olive green trousers, is seen from behind walking down a bright, modern office hallway. They are carrying a large yellow backpack and holding a folder or book in their right hand. The hallway has a high ceiling with exposed ductwork and bright lighting. Other people are visible in the background, slightly out of focus.

# SALTO \ KS

## Keys as a Service

# Salto KS Applications

Easy to install and manage, Salto KS brings access control to small and medium businesses at a fraction of the cost of a fully-wired solution without compromising on security and functionality.

## Retail Stores

### Practical Benefits

- Download Salto KS free app on your devices and **manage access across multiple locations anywhere you are.**
- **Grant temporary access.** Send a temporary code to let the delivery man in.
- Thanks to a **growing range of integrations (e.g. CCTV systems)**, you can also keep an eye on everything happening in your building.

## Rental Properties

### Practical Benefits

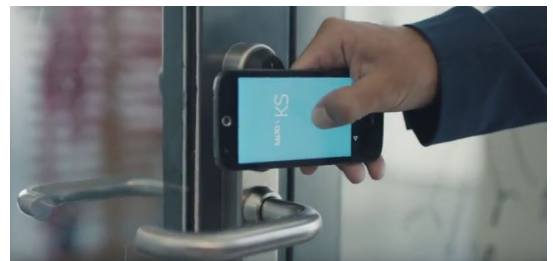

- **Manage access with convenience.** Easily assign tags to your guests to grant them access to your property.
- **Instant blocking.** Deactivate a tag as soon as your guests check out.
- Use Salto KS mobile app to **have full control of your property on-the-go.**

## Shared Spaces

### Practical Benefits

- **Superior access management platform.** Users can book their space and open doors through their smartphone.
- **Control who goes where, when.** Get live notifications to manage access to your building in real time.
- **Open doors remotely** to let someone in without assigning a tag or a temporary access code.

# Salto KS Main Components

## Salto KS Tags

Tags replace that ring of keys and grant designated access to visitors, employees, or even delivery services whenever it's appropriate for them to enter. Simply assign a tag and define when and where that tag can go. If your co-worker loses a tag, block it and assign a new one.

## Salto Cylinders, Escutcheons, Handles and Wall Readers

Salto cylinders and handle locks are battery operated and wirelessly connect to the IQ to check whether the presented tag or smart device have the appropriate access rights to gain access. You even get a notification when batteries are low and it's time to replace them. Fully weatherproof, all hardware components are also suitable for your outdoor doors and gates.

# Salto KS: Wireless Access Control Made Easy

Enjoy a smarter way to control in real time who can enter which doors with Salto KS. Wireless and cloud-based, every function is always right there on your screen. And with the mobile app, managing who can go where and when in your building is as easy as swiping or tapping a button.

## Benefits

**Real-time management from any device.** Thanks to the free Salto KS app you will get live notifications and have full control of what's happening in your building anywhere you are 24/7 (Who has got access to that door? When? Has that door been left open?).

**More security for your business.** Salto KS boosts the overall security of any building. Whilst your new locks will resist if a fire breaks out or if a burglar tries to drill them open, you'll get live notifications if a door is left open or if someone tries to enter with a blocked credential. Safety measures also protect the cloud where you will securely store your data and manage every feature of your new system.

**Easy to install.** Since you don't have to run wires to each door, locks can be fitted in less than 5 minutes. You don't even need to install additional software: the system automatically connects to the cloud and you could be ready to roll in less than 20 minutes.

**Your finance department will love Salto KS.** When you install a Salto KS system you are making the right investment:

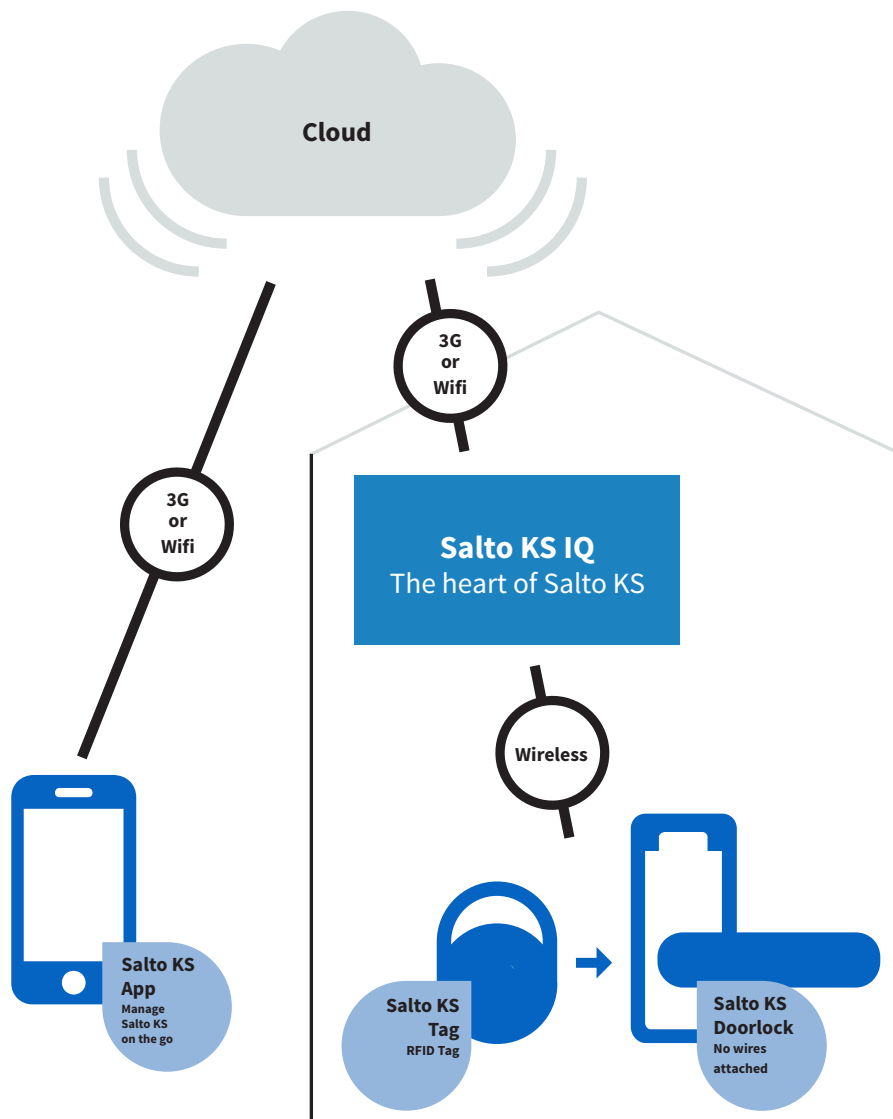

- You won't incur the installation cost of a fully-wired electronic solution
- With Salto tags you'll save on maintenance costs associated with rekeying a mechanical lock
- Thanks to the cylinders equipped with extra long-lasting batteries (up to 40000 openings which is roughly 55 times a day for two years!) which consume only a fraction of always-on wired locks, you'll see real savings on your energy bill.
- You'll choose the subscription plan that best suits the size of your business and your individual requirements.

## Key Points

- IQ unit distance to lock up to 10m
- 16 doors per IQ unit
- Unlimited IQ units per account
- Repeaters extend to up to 40m
- Subscription Plans
- Manage on the go with Salto KS app
- Live notifications
- Real-time reporting
- Exit-safe functionality always active

## How It Works

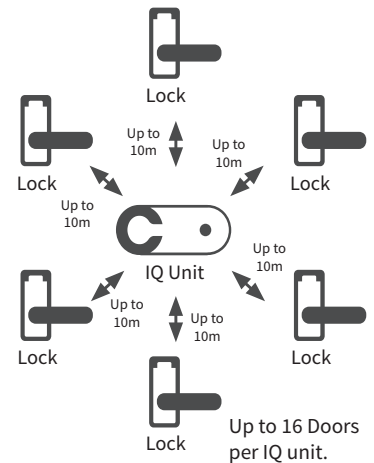

SALTOKS.COM and the mobile app are your portals to your account, where you can create access group, manage users and view entries while your data are securely stored in the cloud.

The IQ is the hub of the system. Finds the best connectivity to communicate with Salto KS locks and Salto KS apps.

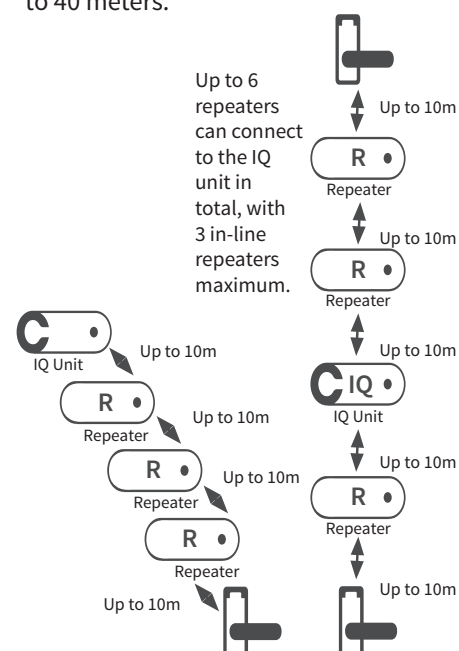

The Salto cylinders and escutcheons are specially designed to fit different profile doors and offer a wide range of finishes to choose from.

Salto RFID tags make keys a thing of the past. The Salto KS tag triggers the lock so visitors or employees can enter easily and according to their access rights.

The IQ unit is the brain of your system and receives all the changes and setting from the Salto KS applications. An IQ unit can have a distance of up to 10 meters from an access point.

Adding a repeater allows you to extend the distance between the IQ unit and your locks by up to 10 meters. You may add up to 6 repeaters in between an IQ unit and a lock which means that the maximum distance between a door and the IQ unit is up to 40 meters.

## Salto KS Main Components

## Salto KS Account

Create profiles for users, assign or block tags, define which doors they may enter on which days, at which times. Oversee access across multiple locations from one single account. Send a one-time credential to a guest as it offers authentication both via tag and mobile phone. Manage everything live from any device with an internet connection – phone, tablet, smartphone etc.

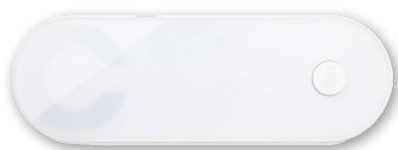

## IQ Units

The IQ is an innovative device that connects to the cloud and receives all changes and settings from Salto applications ensuring that all locks are updated within seconds. **Two different versions of the IQ unit are available to exactly match your requirements.**

### IQ Unit 1.0

The Salto KS IQ 1.0 connects to the internet using **an inbuilt 3G module** **without having to rely on any existing network infrastructure.**

**It doesn't use the wifi and manages internet connectivity by itself.**

### IQ Unit 2.0

The Salto KS IQ 2.0 connects your wireless locks to the SALTO KS cloud.

The Salto KS IQ 2.0 permits to connect the electronic locks and cylinder to the cloud directly to the existing internet connection **through WIFI or 3G connection** in case there's no existing Internet connection.
