

Salto KS - Keys as a Service

How it works

Incorporating SALTO's proven reliability and stability in cloud-based access control, SALTO KS - Keys as a Service - offers a solution that every business is looking for with vastly better functionality and performance than is possible with a traditional solution.

SALTO KS provides a flexible access control management system that requires no software installation or the added expense of a fully-wired electronic product. All that is needed is an online device with an Internet connection.

- SALTO KS has established proven reliability and its recognised stability brings cloud access control to any business, providing vastly better functionality and performance than is possible in a traditional mechanical solution.
- A flexible management system that only requires an online device with an Internet connection.

Open doors remotely

- With SALTO KS "Code," SALTO KS' one-time password technology, users can open doors remotely without a key. One of the cool but functional features of SALTO KS is the remote access.

Gain activity insights

- Receive notifications regarding door and user activity. Saltoks.com provides a message centre that allows users to self-configure messages. For example, learn who entered at what time, or when a door is left open. Messages can be configured to be sent to a number of recipients and to three receiving device types: Email, SMS and App push notifications.

Multi-platform

- Manage SALTO KS from any device – phone, tablet, PC – all you need is an online device with an Internet connection.

Security

- With SALTO KS App "Code," SALTO KS' one-time password technology, the system makes sure users have proper rights to perform changes.

Subscription required

- Based on number of users.

Combining intuitive software platform with high-quality hardware, **you don't require any complicated training** to use Salto KS. Let's see why:

1 Real-time control

Thanks to Salto KS management platform, you will:

- Create profiles for users, assign or block tags, define which doors they may enter on which days, at which times.
- Let your co-worker or the delivery guy in remotely.
- Oversee access across multiple locations from one single account.
- Send a one-time credential to a guest as it offers authentication both via tag and mobile phone.
- Manage everything live from any device with an internet connection – phone, tablet, smartphone etc.
- Put door into office mode, then lock later.

2 IQ Unit

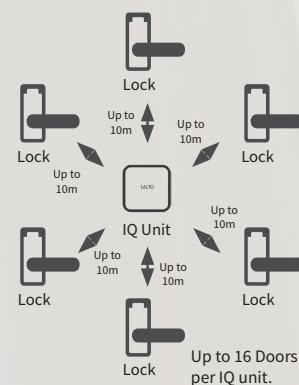

The IQ is an innovative device that receives all changes and settings and ensures that all locks are updated within seconds. It manages internet connectivity by itself.

3 Salto cylinders, escutcheons, handles and wall readers

Salto cylinders and handle locks are battery operated and wirelessly connect to the IQ to check whether the presented tag or smart device has the appropriate access rights to gain access. You even get a notification when batteries are low and it's time to replace them. Fully weatherproof, all hardware components are also suitable for your outdoor doors and gates.

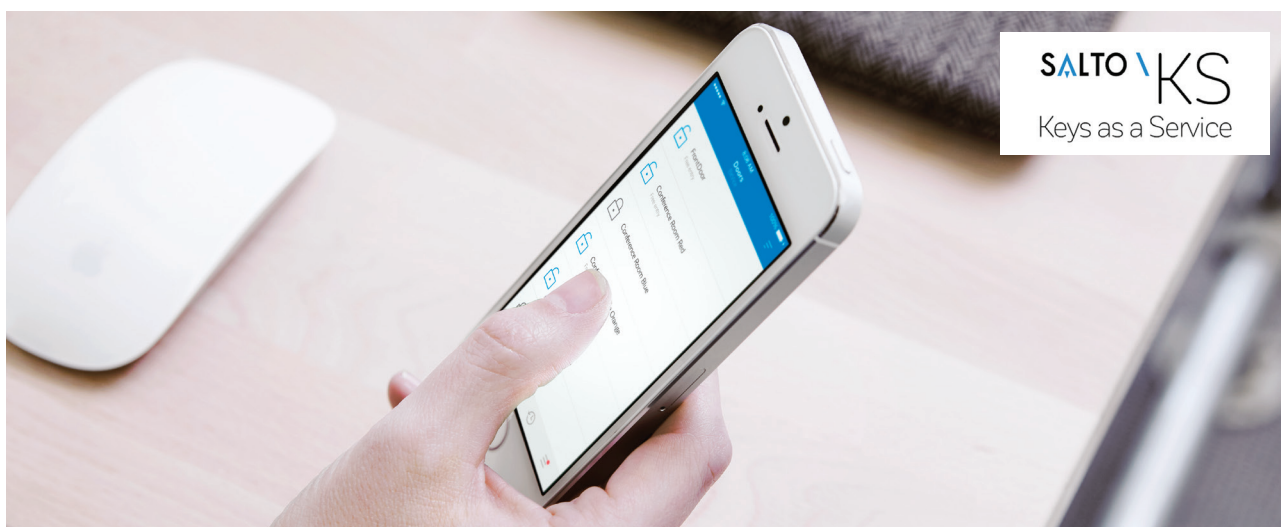

4 Salto KS tags - stop copying keys

Tags replace that ring of keys and grant designated access to visitors, employees, or even delivery services whenever it's appropriate for them to enter. Simply assign a tag and define when and where that tag can go. If your co-worker loses a tag, block it and assign a new one.

Salto KS - System Example & What You Need

Getting Started: 1 Door Example

- A**
- 1x Web browser.
 - 1x IQ Unit (10m range, max. 16 doors).
 - 1x Maintenance Card.
 - 1x Annual Subscription Voucher.
 - User credential(s).

Cylinders can be retrofitted to existing lockcases.

- B Lock Type:**
- 1x Handle Sets or
 - 1x Wall Reader or
 - 1x Cylinder or
 - 1x Padlock or
 - 1x Panic Bar.

- C Locking Mechanism:**
- 1x Lockcase or
 - 1x Electric Strike or
 - 1x Magnet.

For additional door(s), you only need additional lock types and locking mechanisms. If distance is greater than 10m or the door is in another location, an additional IQ unit is required.
